Department, Year: III BCA

Abstract

Shasun Prepify is a mobile-based, AI-integrated platform designed to help BCA students of Shasun Jain College prepare for campus interviews. It offers resume analysis, company-specific preparation, mock interviews, coding practice, aptitude training, and progress tracking. Using technologies like React Native, Firebase, GPT-3.5, and Whisper API, the app delivers a personalized, interactive, and cost-free preparation journey aimed at improving placement outcomes.

Introduction

Campus recruitment remains highly competitive, and many students struggle to access quality, personalized interview preparation. Traditional training methods often lack engagement, feedback, and flexibility. *Shasun Prepify* addresses these gaps by offering AI-enhanced mock interviews, technical assessments, and resume feedback on a mobile-first platform accessible anytime.

Objectives

1. To build a cross-platform mobile app for BCA interview preparation.
2. To provide AI-driven resume analysis and improvement tips.
3. To simulate real interview experiences with voice/video responses.
4. To offer daily technical and aptitude practice modules.
5. To track student progress and readiness with visual dashboards.
6. To help students prepare for specific campus recruitment companies.
7. To allow offline access for continued learning without internet.

Existing Problems

- Limited access to personalized interview practice.
- Resume-building support is generic and non-interactive.
- Lack of structured technical and aptitude preparation.
- No centralized data on company-specific recruitment trends.
- Inability to track improvement or readiness over time.

Proposed System

Shasun Prepify will be a one-stop mobile app integrating AI, resume analysis, mock interview simulations, and technical/aptitude training. Students can upload resumes, take skill assessments, practice interviews, and view feedback—all in one app. AI models will provide real-time feedback on answers and recommend personalized learning paths.

Features

Student App

- User Authentication & Profile
- Resume Management & Feedback
- AI Mock Interview Practice
- Technical Assessment (Coding + MCQs)
- Learning Resources & Company Guides
- Progress Dashboard
- Offline Support & Notifications

Technology Stack

Layer	Tools Used
Frontend	React Native, Expo, TailwindCSS
Backend	Firebase Auth, Firestore, Cloud Storage
AI Integration	OpenAI GPT-3.5, Whisper API, TensorFlow Lite
Code Execution	Judge0 CE API (self-hosted)
Resume Parsing	pdf.js, docx.js
Analytics	Recharts, Firebase Analytics

System Architecture

Flow:

1. User logs in and sets up profile
2. Upload resume → AI analysis → Feedback
3. Start mock interview → Record response → AI feedback
4. Practice coding & MCQs → Score saved
5. Track progress via dashboard

(Diagram placeholder here)

Benefits & Outcomes

- Boosts confidence and readiness of students for interviews
- Increases placement success rates
- Provides real-time, AI-driven, personalized learning
- Works on low-bandwidth, mobile devices
- Creates a standard digital platform for placement prep

Future Scope

- Add peer-to-peer interview practice
- Add mentor feedback and chat support
- Expand to support other departments (B.Com, BBA, etc.)
- Integrate leaderboard and gamification for motivation
- Add real-time interview scheduling with alumni or mentors

Conclusion

Shasun Prepify bridges the gap between academic knowledge and real-world interview readiness. With its AI-powered features, offline access, and mobile-first design, the app aims to become the central tool for Shasun Jain students to prepare, practice, and succeed in their placement goals.
